

# Global mechanism supports

National, performance-based programs  
on RE vision, strategy, institutional and  
capacity development programme

as part of national development  
strategy

## by funding

- Deployment of renewable energy and the associated infrastructure for subsequent electricity generation and consumption through largely distributed decentralised models
- Capacity Building
- Technology development

## to meet the goals

1. Basic Energy access for all by 2025 - to defined by countries based on universal service definition and subsidy for basic needs from govt.
2. 100% Renewable Energy by 2050

## along the principles

- local economic development through renewable energy
- local empowerment, participation and sharing decision-making
- affordability
- efficiency
- least concessional possible
- indebtedness

To ensure that these principles are followed, the national programs must be developed by a multi-stakeholder consortium and within the global mechanism scheme, a multi-stakeholder consortium must allocate the funding.

# Financial models

- Concessional loans to run national feed-in tariff scheme
- Derisking funds
- Feed-in Tariff
- Preparedness funding
