

ONLINE COURSE

ENVIRONMENTAL IMPACT ASSESSMENT (EIA) PRINCIPLES AND PRACTICE

August 10-20, 2026

On Zoom and Moodle

Medium of Instruction: English

Environmental challenges today are no longer confined by borders—they are complex and interconnected and demand informed, science-based decision-making. This has meant there is an urgent and growing need for professionals who can balance development goals with environmental responsibility; and who can think critically to be able to evaluate and manage the environmental implications of projects effectively.

We bring you a 10-day online course, designed to sharpen precisely these skills and learnings. You will learn how to adapt a structured, evidence-based approach and understand project-level assessments. If you are looking for foundational clarity, this programme is structured precisely to do that.

COURSE CONTENT

- Principles in international law for environmental protection
- The need for and components and processes of EIA
- Methodology for baseline data collection for air quality, water, ecology and biodiversity
- Identifying and screening environmental impacts
- Preparing monitoring and management plans
- Creative use of satellite data for basic understanding of land use pattern changes, project footprints, and temporal changes

COURSE TAKEAWAYS

- Self-paced course hosted on a digital learning platform, with pre-recorded sessions in structured modules
- Certificate of participation (after successful completion of training)
- Access to relevant learning resources from CSE
- Access to subject experts and guides

“The course has been very informative for me, especially since I am dealing with EIA cases regularly.”

CHANDRASEKHAR

former Member Secretary, Bihar State Pollution Control Board
