Sustainable Urban Water Management – Challenges and Opportunities in mainstreaming Climate Adaptation

DATE: 5TH MARCH, 2021
TIME: 5:00 – 6:15 PM (IST)

BACKGROUND
Urban water systems are confronted with significantly changing conditions. The impacts of climate change, rapid urbanization, and deteriorating and outdated infrastructure aggravate current water challenges of causing flooding, water scarcity and rehabilitation costs on a scale that will overwhelm the capacities of cities. These conditions are increasing the need for environmentally friendly alternatives and designs that can track and anticipate change, even in the face of uncertainty. It is important to take up the challenge of controlling and judiciously using natural resources to reduce our ecological footprint along with prudent use of water resources.

CSE is organizing this webinar in partnership Alliance for Global Water Adaptation (AGWA) to sensitize key stakeholders about the need to develop water resilience in cities in wake of climate change.

MODERATOR / ANCHOR
Dr Suresh Kumar Rohilla
Senior Director
Centre for Science and Environment

SPEAKERS
Dr John H. Matthews
Executive Director and Co-Founder
Alliance for Global Water Adaptation

Dr Ad Jeuken
Climate Change Adaptation Expert
Deltares

WEBINAR COORDINATOR
Nupur Srivastava
Programme Manager, Water Programme, +91-11-40616000 (Ext: 244)
Email: nupur.srivastava@cseindia.org

WEBINAR DIRECTOR
Dr. Suresh Kumar Rohilla
Senior Director CSE & Academic Director
School of Water and Waste, Anil Agarwal Environment Training Institute—AAETI
Email: srohilla@cseindia.org
