

REGIONAL WORKSHOP FOR STAKEHOLDER SENSITISATION

CLEAN THE LIME KILN

Pathways to Improve Air Pollution Mitigation in Rajasthan's Lime Kiln Sector

Date:
30 January 2026

Time:
9:00 AM – 3:00 PM

Venue:
The Fern Residency, Jodhpur

Rajasthan hosts a large number of lime kilns supplying key industrial sectors. However, continued reliance on outdated technologies and poor pollution control practices has resulted in high emissions and persistent compliance challenges.

As part of its knowledge support to the Rajasthan Pollution Control Board (RSPCB), the Centre for Science and Environment (CSE) has conducted a comprehensive assessment of the lime kiln sector across major clusters in the state. The study identifies few gaps in technology, compliance, and operations, while also highlighting **cost-effective and technically feasible pathways for modernisation and emission reduction**.

To disseminate the findings and enable informed dialogue between regulators and industry, CSE with support of RSPCB is organising this **one-day sensitisation workshop**.

WORKSHOP FOCUS

- Key findings from the sectoral assessment
- Pollution monitoring and control measures for lime kilns
- Options for technological upgradation and emission reduction
- Strengthening regulatory and policy frameworks for the sector

This workshop aims to support coordinated action between regulators and industry to improve environmental performance and compliance in Rajasthan's lime kiln sector.
