

## RESIDENTIAL TRAINING ON

# WASTE MANAGEMENT

## A CRADLE-TO-CRADLE APPROACH WITH FOCUS ON CONSTRUCTION & DEMOLITION WASTE MANAGEMENT AND DUST CONTROL

Dates: **11<sup>th</sup> to 14<sup>th</sup> April 2023** | Last date to apply: **5<sup>th</sup> April 2023**

Venue: **Anil Agarwal Environment Training Institute,  
Nimli (near Alwar), Rajasthan**

**T**he current construction chain including construction and demolition (C&D) waste management, site management for dust control, planning and development of related infrastructure among others in most cities is resource-inefficient and environmentally insensitive. As per latest source apportionment studies, dust potential of the construction sector and other associated sources was responsible for up to 41 per cent of PM10 generation in Delhi.

To curb these environmental impacts, the environment ministry issued several guidelines for dust control from C&D activities. C&D waste management rules 2016 were also notified. However, as per CSE's assessment, implementation of these and earlier regulatory interventions has been very weak. The problem is not limited to Delhi – it can be witnessed across the different cities enlisted under Swatch Bharat Mission 2.0 and the non-attainment cities (NAC), in India. In extreme circumstances, banning construction activities altogether for extended periods of time has emerged as a measure, which has a severe economic impact. A combination of actions to green the entire C&D waste chain is the need of the hour.

CSE invites applications for an on-site course on this critical subject. The course aims to equip construction managers/developers and urban local bodies (ULBs) with the necessary technical knowhow for efficient C&D waste management and dust mitigation, both at the city and site levels. Areas ranging from regulatory frameworks to planning for infrastructure to progress reporting protocols as required under the National Clean Air programme (NCAP) and other monitoring frameworks for these cities will be covered in the training.

### COURSE HIGHLIGHTS

- Rules/guidelines for C&D waste management and dust control measures -- their respective adherences/non-compliances and case studies from non-compliant cities.
- Legal, policy and administrative frameworks of C&D waste management including roles and responsibilities of actors involved.
- Waste estimation and extrapolation at city

and site levels.

- Planning for infrastructure such as collection points, transfer stations, transportation routes, vehicle fleets, processing technologies, recycling site identification etc.
- Technology and techniques for onsite and offsite waste reduction/recycling
- Impact assessment and self-declaration responsibilities for the construction sector

### COURSE FEES

₹28,000 (Course fee includes tuition fee, external expert lecture sessions, training materials, Boarding and lodging, Transport from New Delhi to AAETI and back)

### WHO CAN APPLY

Officials from urban local bodies and other government departments, pollution control officials, regulators, architects, engineers, planners, builders/developers, site managers, students and researchers.

### COURSE COORDINATOR

#### **Harikrishnan C U**

Programme Officer, Sustainable Buildings and Habitat Programme, CSE, Phone: 9495406904, Email: harikrishnan@cseindia.org

### COURSE DIRECTOR

#### **Rajneesh Sareen**

Programme Director, Sustainable Buildings and Habitat Programme, CSE, rajneesh.sareen@cseindia.org

**Sponsorships and discounts available** (subject to satisfactory fulfilment of application form)
