Swachh Bharat Mission (SBM) 2.0 aims to ensure a healthy and clean environment; efficient management of used water is critical for achieving this goal. Apart from the centralised and decentralised approaches of used water management, Interception and Diversion (I&D) is seen as an effective approach to manage used water, especially in the cities/town where there is no sewerage network available and used water management poses a significant challenge.

Centre for Science and Environment (CSE), in collaboration with the CPHEEO, is organising a two-day Workshop and Training of Trainers (ToT) on ‘Used Water Management through Interception & Diversion Systems’. The workshop-training will be focused on effective planning, design and implementation of these systems, and on cross-learning through sharing of experiences of I&D-based urban water management potential in India.

**TRAINING METHODOLOGY**

The training methodology will follow a mixed approach involving lectures, group exercises, interactive discussions, real-time case studies, video documentaries etc.

**WHO WOULD THIS PROGRAMME BENEFIT?**

Technical officials from government departments, NGOs, private consultancies, and academia – anyone involved in planning, designing and implementation of I&D projects.

**WHAT DOES THE PROGRAMME OFFER**

- Concept of urban used water management and I&D
- Current and old examples of I&D work done in India
- Overview of I&D component in SBM and AMRUT
- Case studies of successful I&D projects from different states
- Planning and design considerations of I&D projects
- Low cost I&D and in-line nullah treatment
- Successful case studies of I&D projects planned/implemented under NMCG
- Laboratory protocols of used water management

**TRAINING FEES**

There is no training fee. CSE will provide travel and accommodation support (excluding intercity travel).
