May 23rd to June 1st, 2023

Duration: 10 days
Platform: Zoom and Moodle

**PARTICIPANTS WILL BE AWARDED
A CERTIFICATE OF PARTICIPATION
ON SUCCESSFUL COMPLETION
OF THE PROGRAMME**

The Water Act, 1974, the Air Act, 1981 and Environment Protection Act, 1986 enacted in order to prevent and control damages to the environment. In today's scenario, there is a dire need of a strong environmental regulatory framework. India does have a comprehensive system of regulations to protect its natural environment and the health of its people. Government in the last few decades has shown keen interest in protecting and promoting the environment and consequently enacted various Environmental Laws. The understanding of different environmental laws is important in preventing environmental damage and ensuring effective management of the environment and its multiple ecosystems.

There also seems to be a gap between the available regulations or laws and the basic enactment or application of the laws into the real time scenarios. To address this gap, Centre for Science and Environment, is organizing a 10 days online training course on "Understanding Environmental law for improving environmental management".

This comprehensive online training will cover the relevant issues, recent advancements and significance of environmental laws.

Mode of training

The course is designed in a manner to help the participants in attending this course along with their regular work and study the course material at their own convenience. Recorded sessions will be uploaded on the training platform for the participants to study. Live online sessions will be organized with experts for Q&A and further discussions.
