

ONLINE TRAINING COURSE ON MAKING DATA MEANINGFUL

(Collection, Collation, Analysis and Presentation of Environmental Data)

16-24 February, 2021 | Course Duration: 1 week (10 hours) | Course Platform: Zoom and Moodle

Environmental data as such does not speak much as it involves a large degree of complexity. The data starts speaking when it is analyzed and interpreted effectively and efficiently. The huge amount of environmental data being generated every hour which is not being used for making decisions, can help in restoring the environmental quality which is good for not only humans but also for the entire ecosystem. It is in this regard that CSE is organizing an online training course to address how environmental data can be made meaningful and presented in an understandable and relatable manner to the relevant stakeholders. To

facilitate the professionals to participate, there is no specific timing for the training sessions and it is a self-paced course.

This training programme will include technical sessions, class exercises and live Q&A sessions with experts for better and in-depth understanding of the basics to the participants. The module makes sure that the participants discuss debate and understand different aspects of data management and presentation with the experts. The aspect of analyzing and presenting data in a more efficient manner through statistical tools will be a part of this training.

MODE OF TRAINING

The online course will majorly be based on self study basis wherein recorded sessions from experts, presentations and reading material will be uploaded on the training platform for the participants to study. The training portal has a dedicated discussion forum where all the queries can be posted and answered by the experts. Additionally, live online sessions will be organized with experts for Q&A and further discussions. The course is designed in a manner to help the participants in attending this course along with their regular work and study the course material at their own convenience.

WHO SHOULD ATTEND?

This training programme will be useful for students, researchers, environmental consultants, government regulators and to any person working or studying in the field of environment and data management, as data is one aspect that all have to work with to make their work relevant.

TOPICS TO BE COVERED

- Structuring and visualization of data- A guide to present statistics
- Central Tendency and Spread
- Distribution of data and : Fault finding, probability distribution
- Source of variability- its analysis
- Forecasting techniques-Trend on environmental quality parameters
- Relationship of variables
- Industrial air pollution assessment
- Environmental load calculation
- Emission inventory
- Prediction of travelling of air pollutant- Air quality modelling
- Air quality index Data Management and Analysis using Microsoft Excel
- Inventorisation of waste water discharge & Load analysis
- Class exercises and presentation of data

Participant fees

INR 2000/- per participant for Indian nationals

US\$ 50 per participant for foreign nationals

PARTICIPANTS WILL BE AWARDED A CERTIFICATE OF PARTICIPATION ON SUCCESSFUL COMPLETION OF THE PROGRAMME

Course coordinator

Shobhit Srivastava
