

STATE-LEVEL WORKSHOP

FROM INFRASTRUCTURE TO SERVICE DELIVERY

Advancing Sustainable FSSM in Rajasthan

October 5, 2026 | From 10 AM

Venue: Howard Johnson by Wyndham, Udaipur, Rajasthan*

Faecal Sludge and Septage Management (FSSM) in Rajasthan is at a juncture where it is transitioning from infrastructure development to sustainable service delivery. While significant investments have been made in setting up FSTPs, ensuring their effective operation, utilisation and integration into city-wide sanitation systems requires focused intervention.

Centre for Science and Environment (CSE) is organising a state-level workshop which aims to bring together all the Urban Local Bodies (ULBs) and stakeholders in Rajasthan on one platform to assess and discuss the ongoing initiatives in FSSM in the state. The workshop will try to bridge the gap between infrastructure and on-ground service delivery by addressing operational sustainability, institutional coordination and governance mechanisms.

Experiences from other states will be shared as well, emphasising on occupational health and safety and strengthening of the IEC, BCC and monitoring systems. State government officials will be sensitised about operational sustainability and governance strengthening (including plant utilisation and rural-urban convergence).

Note: Participation is only open to Rajasthan government officials from ULBs, DLB, RUIDP, RUDSICO, SBM Urban, SBM Gramin, Panchayati Raj department and from state-based PMUs, NGOs, academia and consultants

* To be confirmed
