International response to black carbon science: Implications for transport policy in developing and developed countries

Ray Minjares, Clean Air Program Lead

Anil Agarwal Dialogue 11-12 March 2015 New Delhi, India

Key Messages

- BC science suggests diesel engines are a major contributor to health and climate impacts
- International transport policy has responded with a set of best practices for addressing these impacts
- These best practices are:
 - Require all new diesel engines to meet Euro 6/VI, US 2010, Tier 3 or equivalent emission standards
 - Cap diesel fuel sulfur content at 10 parts per million
 - Target and replace high emitting diesel engines
- These actions will significantly reduce the health impacts of vehicle emissions exposure and reduce near-term climate change

What scientific studies have informed BC transport policy?

Alternative Scenario (Hansen et al, 2000)

"Concievably a reduction of climate forcing by 0.5 W/m² or more could be obtained by reducing **black carbon emissions from diesel fuel** and coal."

" If the World Bank were to support investments in modern technology and air quality control in **India** and China, for example, the reductions in tropospheric ozone and **black carbon** would not only improve local health and agricultural productivity but also benefit global climate and air quality."

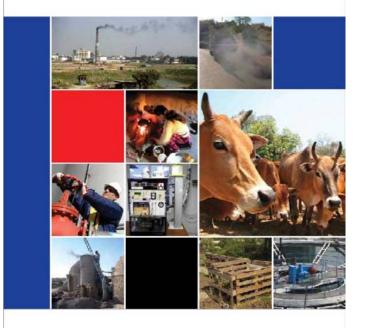

Hansen, J., Sato, M., Ruedy, R., Lacis, A., & Oinas, V. (2000). Global Warming in the 21st Century: An alternative Scenario. *Proceedings of the National Academy of Sciences*, *97*(18), 9875–9880.

WHO Report on Health Impacts of Black Carbon (2012)

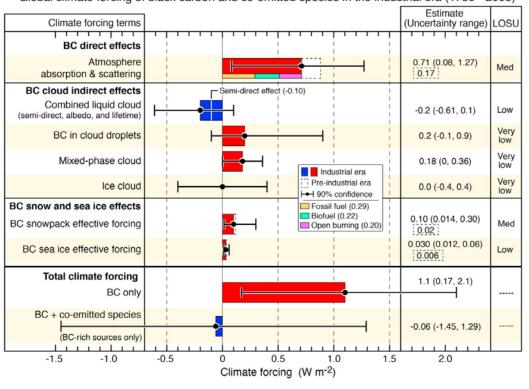

"BC may not be a major directly toxic component of fine PM, but it may operate as a universal carrier of a wide variety of chemicals of varying toxicity.."

"...removing particulates with a modern diesel particle trap ...resulted in a complete absence of cardiovascular effects."

Janssen, N. A. H., Gerlofs-Nijland, M. E., Lanki, T., Salonen, R. O., Cassee, F., Hoek, G., et al. (2012). *Health Effects of Black Carbon* (pp. 1–96). Copenhagen: World Health Organization.

Bounding the Role of Black Carbon in the Climate System (Bond et al, 2013)

Global climate forcing of black carbon and co-emitted species in the industrial era (1750 - 2005)

"We estimate that **black carbon**, with a total climate forcing of +1.1 W m², is the **second most important human emission in terms of its climate forcing** in the present-day atmosphere"

"Diesel sources of BC appear to offer the most promising mitigation opportunities in terms of near-term forcing and maturity of technology and delivery programs."

Bond, T. C., Doherty, S. J., Fahey, D. W., Forster, P. M., Berntsen, T. K., DeAngelo, B. J., et al. (2013).
Bounding the role of black carbon in the climate system: A scientific assessment. *Journal of Geophysical Research-Atmospheres*. doi:10.1002/jgrd.50171

What has been the international policy response?

International Maritime Organization Adopts Research Plan on Black Carbon (2011)

INTERNATIONAL MARITIME ORGANIZATION "...ship emissions of black carbon and other particulate matter affecting the Arctic region need to be addressed specifically as an integral part of the **Organization's work on** prevention of air pollution from ships and its contribution to combat climate change and global warming."

Effect of Vehicle and Fuel Standards on Black Carbon

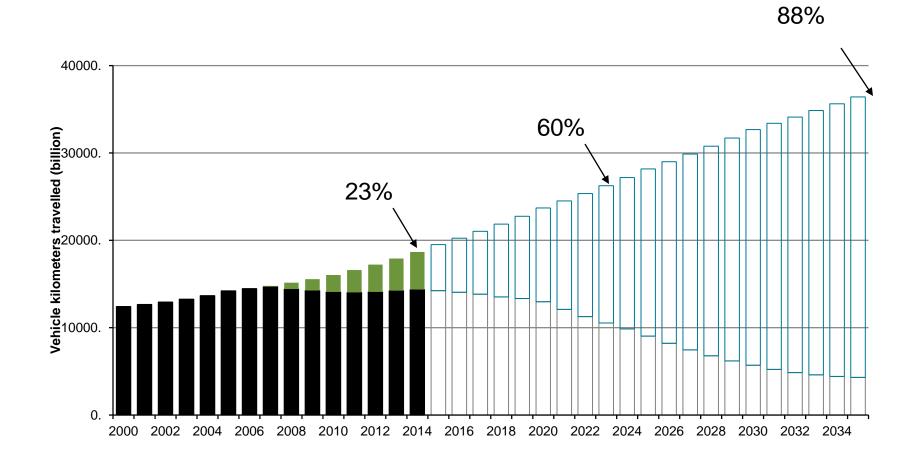

Share of global vehicle activity that meets best practice emission standards*

Clean Transportation

* Captures on-road vehicles only and does not include two-or three-wheelers. US Tier 2 assumed equivalent to Euro 6.

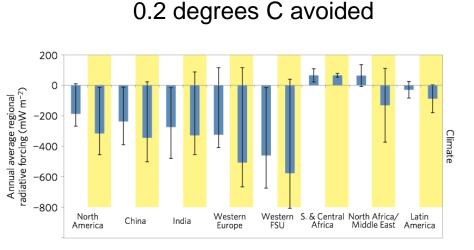

Potential share of global vehicle activity that can meet best practice emission standards*

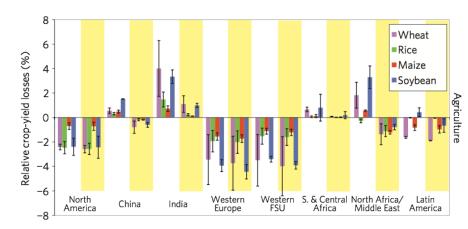

lean Transportation

* Captures on-road vehicles only and does not include two-or three-wheelers. US Tier 2 assumed equivalent to Euro 6.

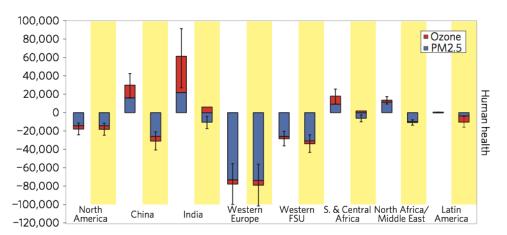

Climate, Health, and Agricultural Benefits of Vehicle Emission Controls

6-20 MMT avoided food crop losses

120,000-280,000 early deaths avoided

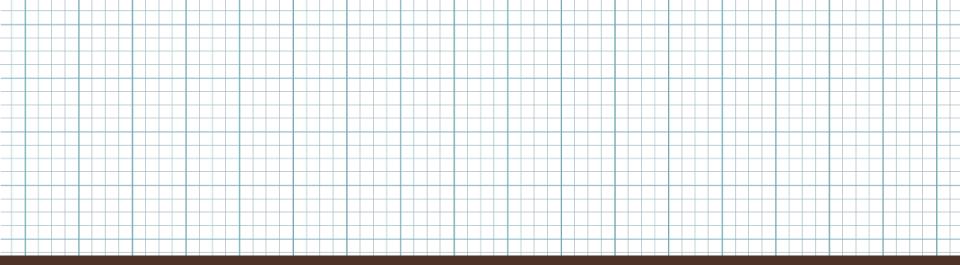

Shindell, D., Faluvegi, G., Walsh, M., Anenberg, S. C., Van Dingenen, R., Muller, N. Z., et al. (2011). Climate, 21 health, agricultural and economic impacts of tighter vehicle-emission standards. *Nature Climate Change*, 1(1), 59–66. doi:10.1038/nclimate1066

Effect of Vehicle and Fuel Standards on Black Carbon

Best Practice Policies for National Diesel BC Control

- New engine standards
- Euro 6/VI or equivalent for on-road + filterforcing standards for off-road and marine engines
- Fuel quality standards
 - 10-15ppm diesel fuel sulfur limit
- **In-Use Programs**

Scrappage/replacement of high emitting engines

Commit to soot-free engines in public fleets Invest in refueling stations to provide cleaner fuels

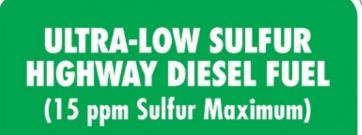

- Adopt low-emission zones
- Adopt vehicle scrappage programs

Technological Strategy for Diesel PM/BC Control

Required for use in all model year 2007 and later highway diesel vehicles and engines.

Recommended for use in all diesel vehicles and engines.

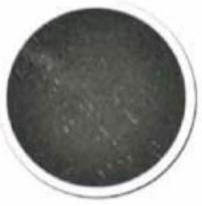

The Evolution of the Soot-Free Engine

No retrofit system Uncontrolled Diesel Exhaust (Level 1)

Old technlogy Little black carbon removal Little ultrafine PM removal Does not remove lube oil ash

Retrofitted with Diesel Oxidation Catalyst (DOC) (Level 1)

Old technlogy Little black carbon removal Little ultrafine PM removal Does not remove lube oil ash Retrofitted with Partial Filter (Level 2)

Little black carbon removal Little ultrafine PM removal Does not remove lube oil ash Retrofitted with Diesel Particulate Filter (DPF) (Level 3)

New Technology Used on all new trucks since 2007 >85% black carbon removal >85% ultrafine removal >85% lube oil ash removal
