

# THE POLICY & PRACTICE FORUM 2023

***Session 9: Climate Change and Resilience: Framing of Water Sensitive and Water-Wise Cities in the Climate Change Context***

**MAINSTREAMING NATURE-BASED SOLUTIONS IN INDIA'S CITIES**

April 25 - 27, 2023

## Contents...

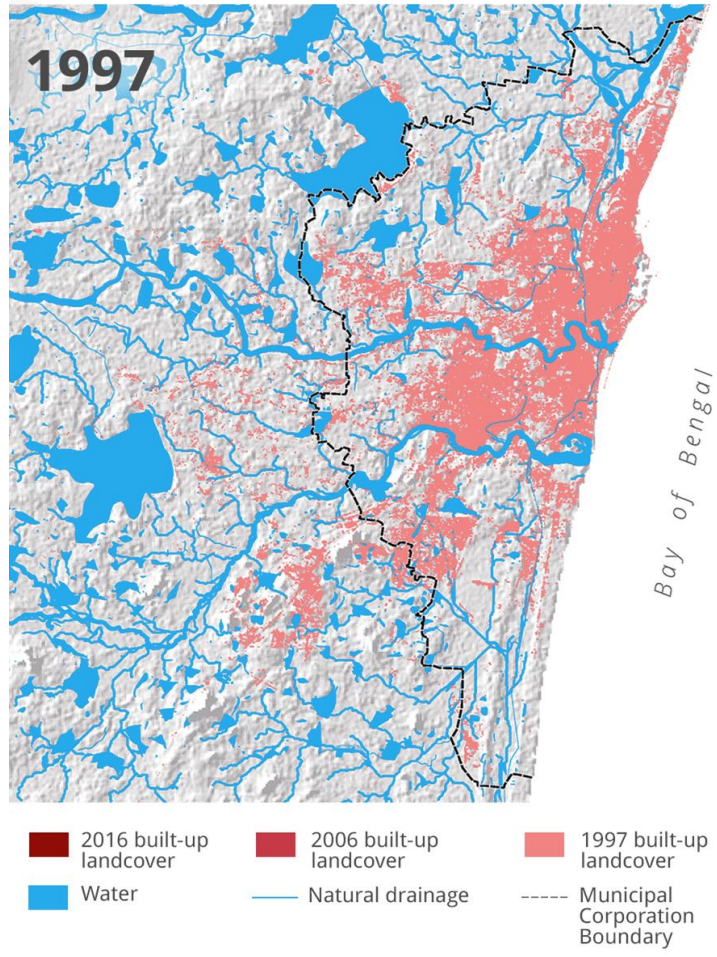

- **OBJECTIVE & VISION:** Addressing climate change through nature-based solutions
- **THEORY OF CHANGE:** How we are integrating nature-based solutions through planning, design and advocacy projects across multiple scales
- **OUR CURRENT EFFORTS AND PROJECTS**
- **KEY TAKEAWAYS AND WAY FORWARD**

**Key Climate risks in India**

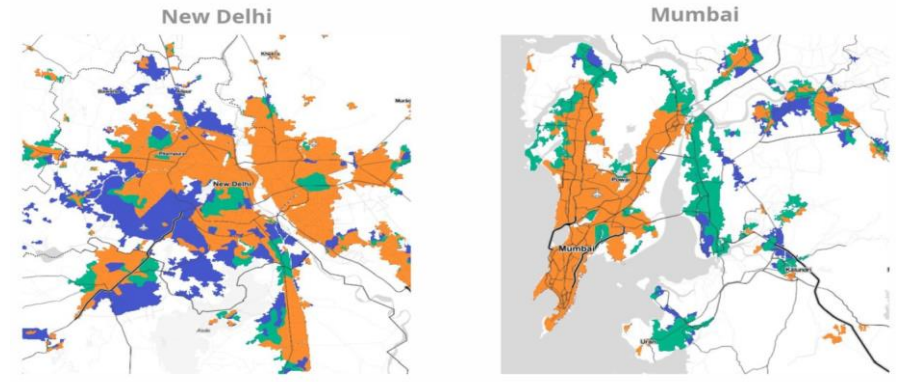

**Exacerbating risks due to the nature of urbanization in India**

**India's Urban Sprawl**

Understanding how Indian cities have grown using land use data for 1985, 1995 and 2005. source: EarthData ORNL, DAAC

**Key Principles**

**1. Protect**

Green Ecosystems and Water Bodies from Encroachment or Pollution

**2. Restore**

Ecological Functions of Degraded or Polluted Landscapes

**3. Enhance**

Coastal, Riparian, Wetland Ecosystems with Hybrid Infrastructure

**4. Construct**

Blue-Green Infrastructure in open spaces, streets, and buildings

**Key Approaches**

**By promoting strategic basin planning and water-sensitive urban design**

**Basin Hydrological Cycles**

**Modified Hydrological Cycles due to urbanization**

**By mainstreaming blue-green infrastructure planning and implementation in Indian cities**

**Gray Approach:** Flushing stormwater as fast as possible through pipes and channelized canals or streams

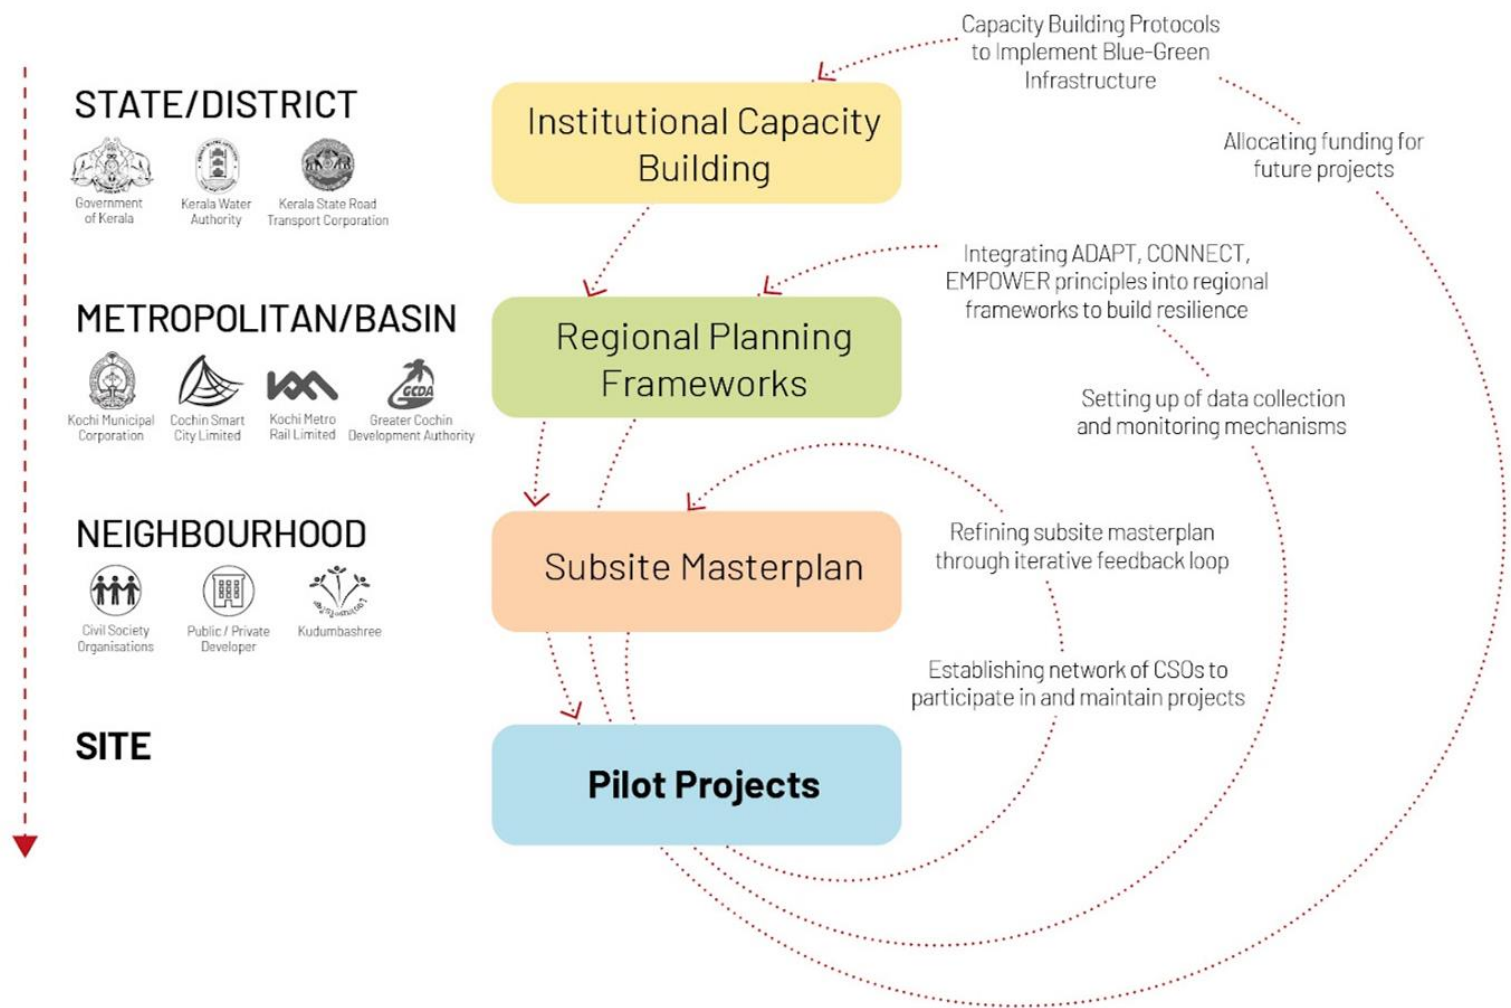

**Blue-Green Approach:** Delaying, storing and filtering runoff in dispersed open spaces, naturalized streams, or streets before flowing into stormwater network

Greater Chennai Corporation (File photo)

CHENNAI: To improve the groundwater table and prevent flooding, the city corporation has proposed to set up a 'sponge park' with artificial pond and rain gardens at the Kargil Nagar flood water pumping station in Manali zone.

## HOW SUCH A PARK WORKS

- A sponge park is an urban space constructed to collect, filter and store the run-off during heavy rainfall
- A tank with several layers of filters using gravel, sand, and biofilters is set up at the centre of the park. It is an artificial wetland structure without any concrete flooring but water infiltration blocks
- Several layers of pond zones are created around it to store water
- Around these pond structures, a rain garden using native species of trees and a top layer of sand and compost is set up to allow faster water infiltration and percolation
- During dry months, the space can be used as a park or recreation area

### IS CHENNAI MONSOON READY?

How has the city's stormwater drain project fared? Chennai architects and planners weigh in on other flood mitigation measures

CHENNAI: Chennai has been alternating between cycles of droughts and floods for the past several years. Manish Jain, director, regional office of Sponge Collaborative, says that the city's rainwater system over the past few years has been in a state of neglect. He says that the city's rainwater system is in a state of neglect and that the city's rainwater system is in a state of neglect.

CHENNAI: Chennai has been alternating between cycles of droughts and floods for the past several years. Manish Jain, director, regional office of Sponge Collaborative, says that the city's rainwater system over the past few years has been in a state of neglect. He says that the city's rainwater system is in a state of neglect and that the city's rainwater system is in a state of neglect.

## Chennai Corporation to develop sponge parks at 10 locations

The estimated cost of the sponge parks is ₹1.06 crore; the work will start this month and is expected to be completed in six months, ahead of the onset of the northeast monsoon, say officials

## Metropolitan Diagnostic Climate Risks and Urban Development

- Urban areas are exposed to elevated flood risks because of impervious catchments that lead to increased runoff.
- Lack of aquifer recharge due to imperviousness increases risk of water scarcity.
- Built-up areas also contribute to urban heat island effect increasing the risk of heat-related fatalities.
- Increased blue-green areas can mitigate some risks. But only 2% of Chennai city are declared parks (SMP) ; 24 km<sup>2</sup> of declared forest in CMA (SMP) and 91.31 km<sup>2</sup> of water bodies present in CMA (C&AG, 2017)

### Land Cover

**Map Data:** ESA World Cover with Global Human Settlement Layer

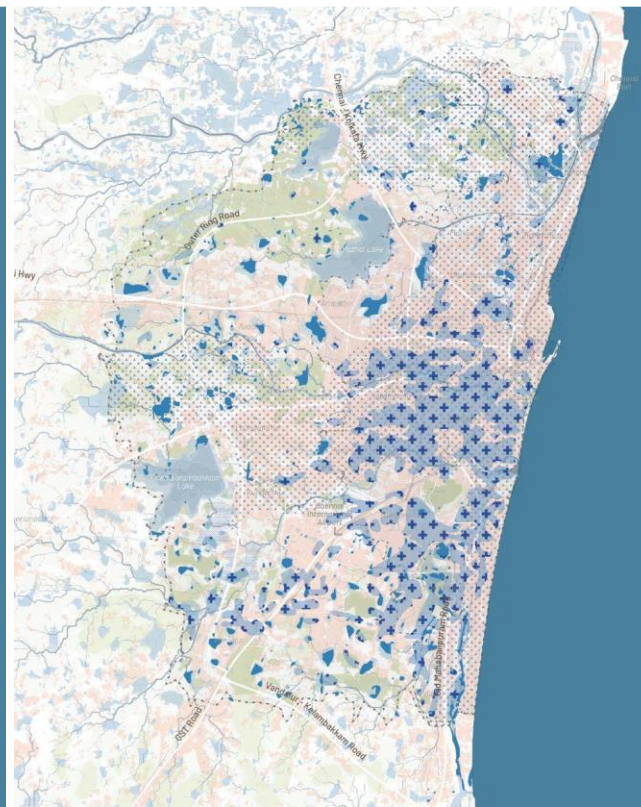

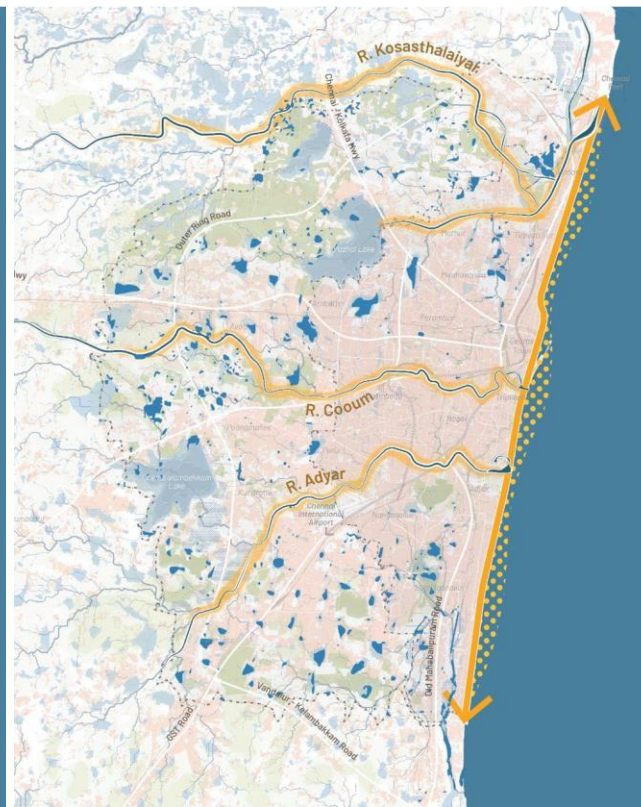

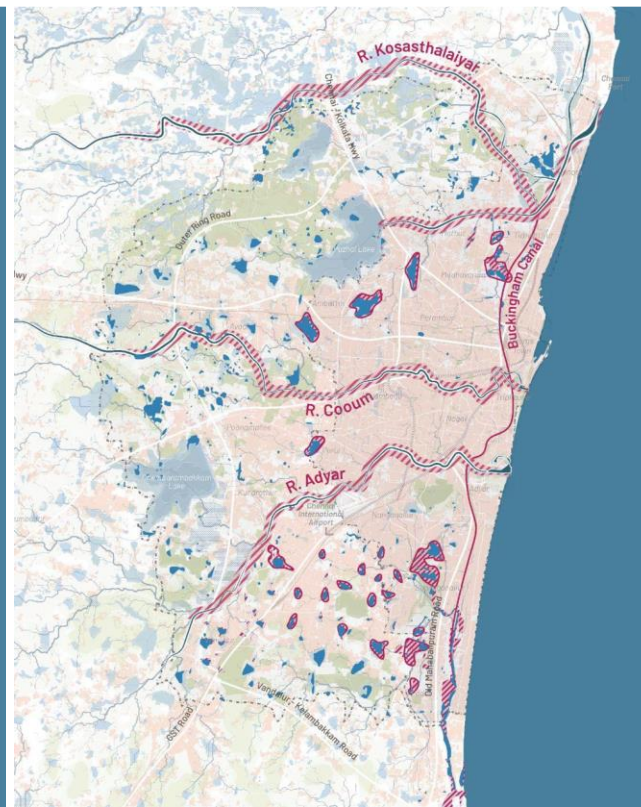

## Sponge City Ecological Framework

**PROTECT** Ecosystems and water bodies from encroachment or pollution **(P)**

**RESTORE** Ecological functions of degraded or polluted landscape **(R)**

**ENHANCE** Coastal, riparian, and wetland areas to withstand climate change **(E)**

**CONSTRUCT** Blue-green infrastructure in urban open spaces, streets, and buildings to replicate natural systems **(C)**

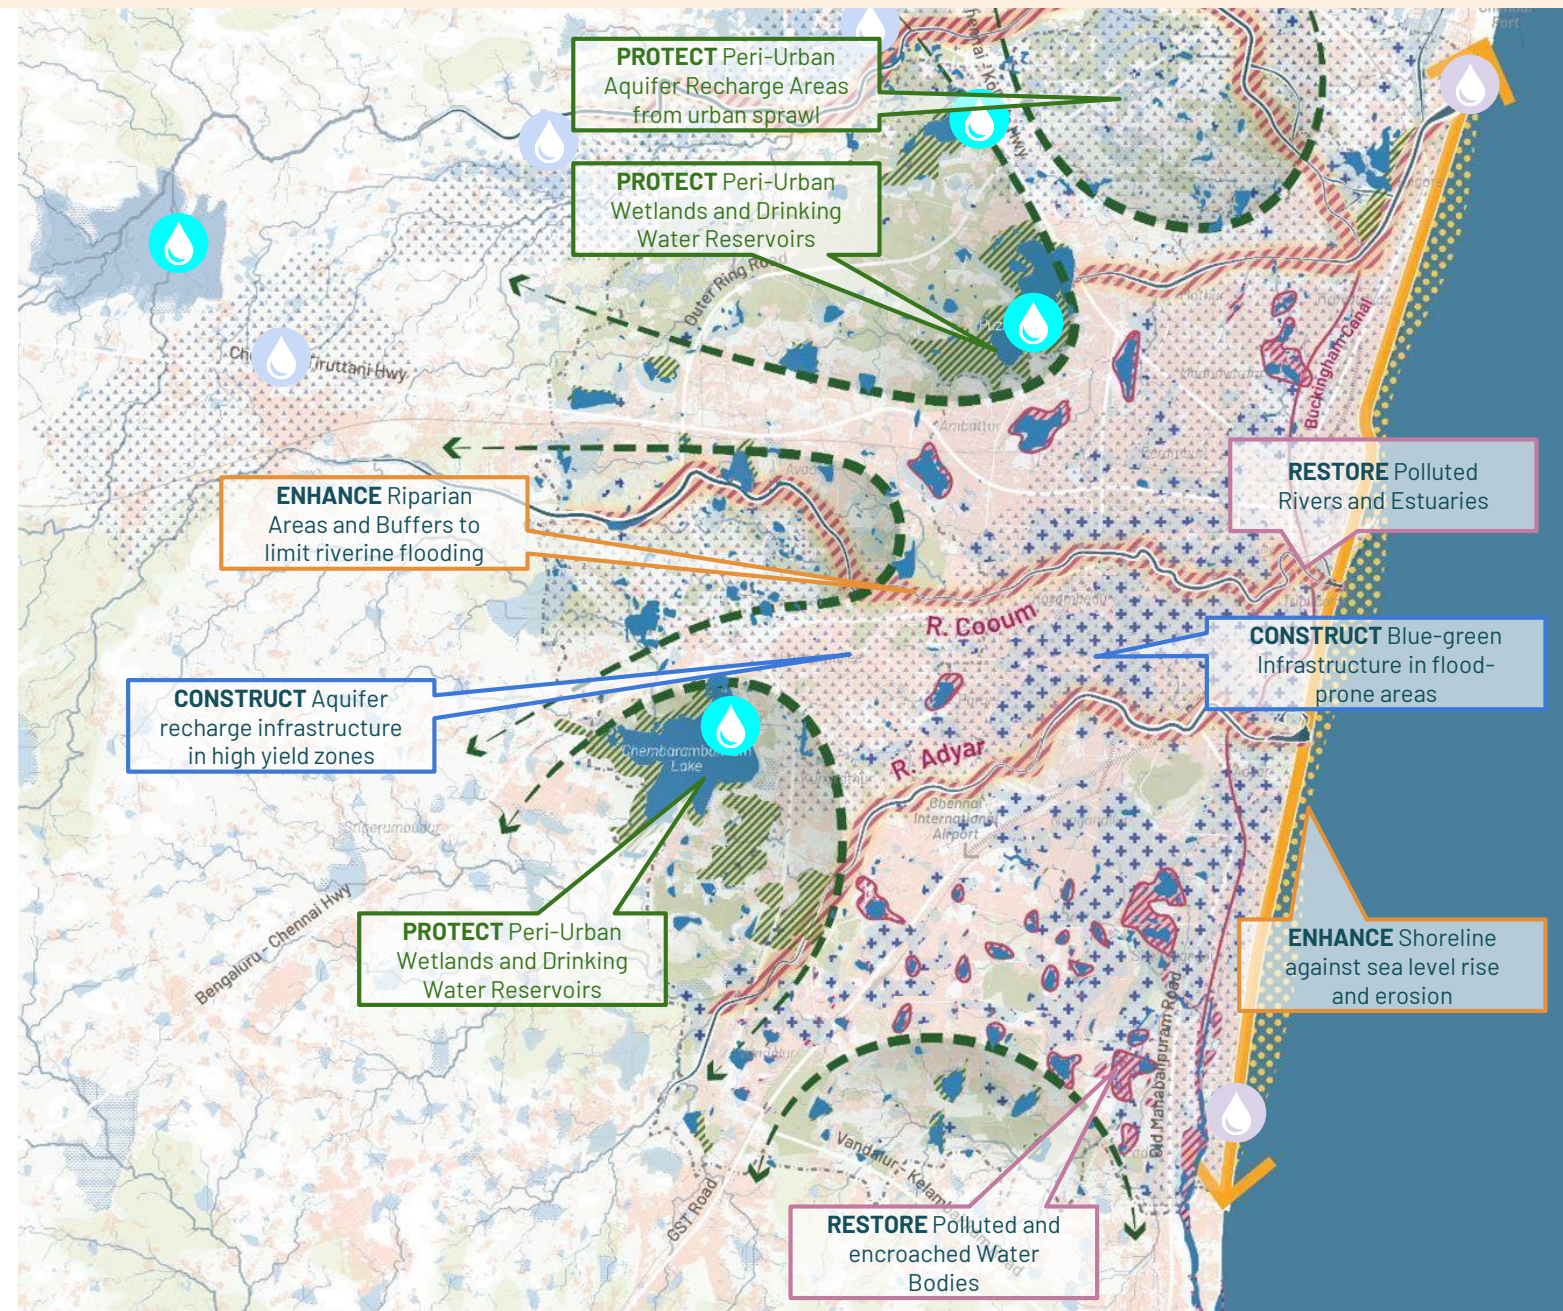

## Sponge City Chennai

Where and how should Chennai prioritize the following nature-based solution actions?

- **PROTECT** Ecosystems and water bodies from encroachment or pollution **(P)**
- **RESTORE** Ecological functions of degraded or polluted landscape **(R)**
- **ENHANCE** Coastal, riparian, and wetland areas to withstand climate change **(E)**
- **CONSTRUCT** Blue-green infrastructure in urban open spaces, streets, and buildings to replicate natural systems **(C)**

# METROPOLITAN SCALE: ADYAR BASIN VISION

## Adyar and the Metropolitan Area

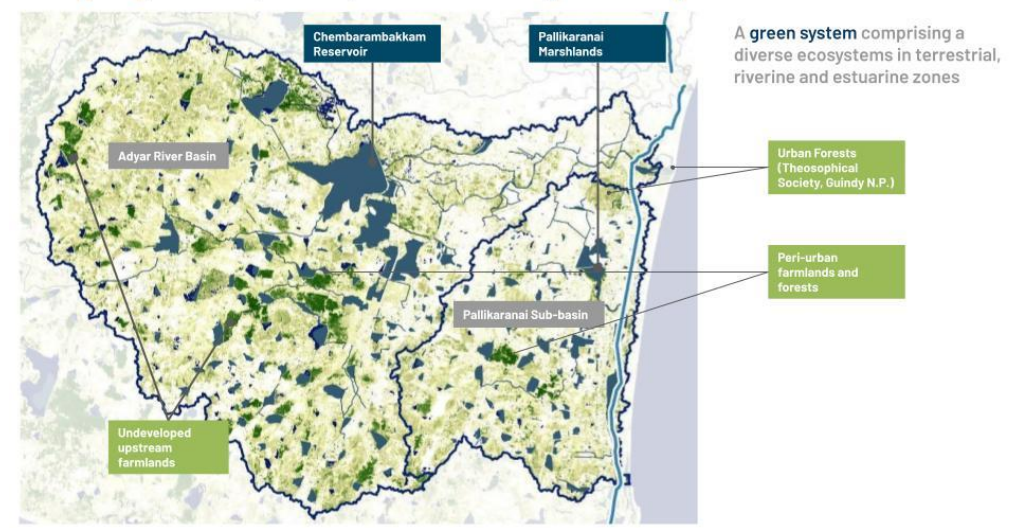

- Adyar basin is the southernmost of the three major river systems within Chennai city extents
- The riverine transect encompasses urban, peri-urban and rural contexts of the Chennai Metropolitan Area
- The Adyar Basin has the river as a major ecological corridor and three development corridors (ORR, GST Road, Bengaluru-Chennai highway)

- **Compelling visuals and storytelling** can be a powerful political tool to communicate risks and co-benefits of bundling nature-based solutions into infrastructure delivery
- **Integration of high-level visions with strategic pilot projects** that touch upon multiple priority areas are necessary for key stakeholders
- **Integrating spatial and non-spatial approaches** : Policymakers, planners, urban designers and engineers need to collaborate to integrate guidelines, plans, and infrastructure projects
- **Institutional Reform:** Design Manuals and Standards at National Level (CPHEEO), Regulations and Bylaws at Local Level
- **Capacity Building:** Updating Engineering Curriculum at National Level, Training for Municipal Engineers and Maintenance Personnel at Local Level
- **Inter-governmental and multi-scalar Coordination:** of blue-green infrastructure strategies and investments at metropolitan, municipal, and ward levels. **Inter-departmental Coordination:** for the integration of multiple systems for implementation and maintenance of blue-green infrastructure.
- **Procurement Reform:** Prohibitive qualifications for Municipal and Multilateral procurement for innovative firms in blue-green space competing against firms with decades of gray infrastructure experience.
- **Green-Blue Financing:** Unlocking new finance models including blended finance, public-private collaborations to finance the planning, design, implementation and maintenance of blue-green infrastructure

# Thank you !
