

BREATHING SPACE

Goal

Learn sources of Air pollution, activities leading to air pollution. Identify the green practices in our daily lives

Ages

10 to 15 years

Time

1 hour

Material

Game board, double-sided question cards, die, tokens (1 per player), paper to keep scores

Type of activity

Group activity
(2-4 players required)

How to Play

1. Keep the cards in three stacks according to their colour, with the colored side face-up.
2. Put all four tokens on the START box. First player rolls the die and moves the token.
3. The colored square the token lands on will decide the card to be pulled from the stacks. Keep the card that has been pulled separate from the stack. For example, if you land on a yellow box, pull out a yellow card from the stack.
4. The player answers the question on the card and checks the answer on the other side. If the answer is right, keep the position on the board. If not, move back to the square where you were earlier.
5. Once a winner is declared, hold a discussion using the investigating questions given below.
 - What are the sources of air pollution?
 - Which colour category did you find the most challenging?
 - Which practices can be adopted for better air quality?
