

# Mainstreaming SFD into practice in Africa: A Webinar

An excreta flow diagram (also often described as shit flow diagram, SFD) is a tool to readily understand and communicate how excreta physically flows through a city or town. The fate of excreta produced by populations across the globe is often poorly understood. SFDs show how it is or is not managed as it moves from defecation to disposal or end-use.

A webinar is being organised to launch SFD Phase-III in Africa. The aim of Phase-III is to bridge the existing gap in availability of data for monitoring safely managed sanitation (SDG 6.2) and for improved planning to achieve citywide sanitation

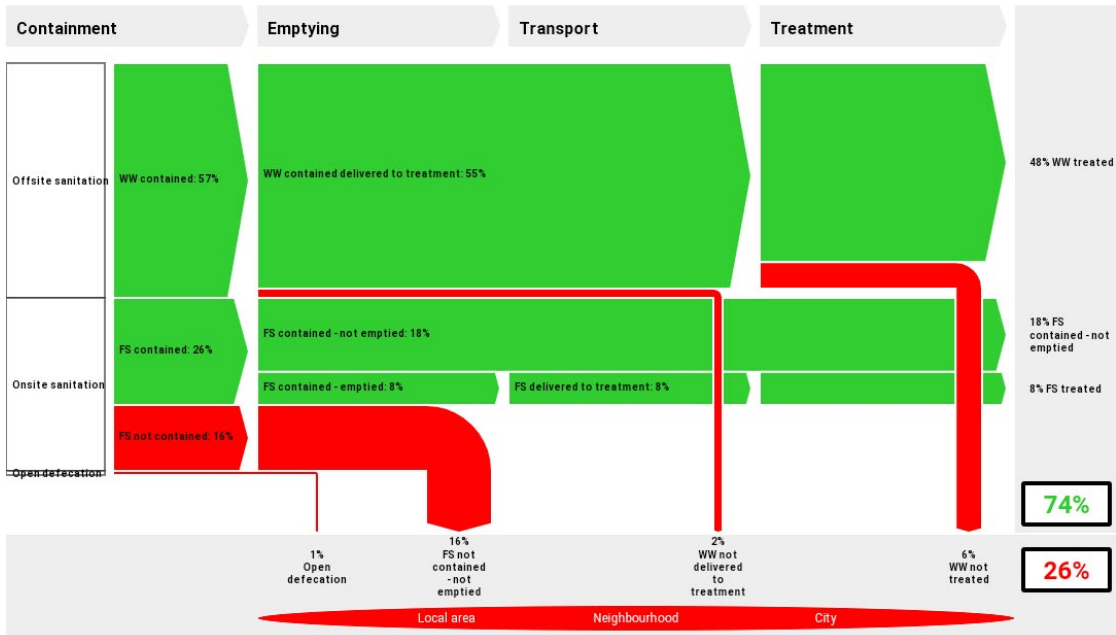

**Durban, KwaZulu-Natal, South Africa**

Version: Reviewed  
SFD Level: not set

Date prepared: 26 Apr 2017

Prepared by: PRG, South Africa

## WEBINAR

Date: 30th April, 2020

Time: 14:00 hrs (South Africa Standard Time)

Participation by invitation only
