TOWARDS SUSTAINABLE BUILDINGS
POLICIES AND PRACTICES
ABOUT CSE
The Centre for Science and Environment (CSE) is a public interest research and advocacy organisation based in New Delhi. The Centre researches into, lobbies for and communicates the urgency of development that is both sustainable and equitable.

ABOUT SUSTAINABLE BUILDING PROGRAMME
CSE’s Sustainable Building Programme strives to create policy and public awareness for effective steps to reduce the resource consumption of the building sector. This programme is designed around a vision for resource efficiency in buildings and to push and track policy development for effective implementation. Green building policies have begun to take shape in India. Science based direction, knowledge based activism, public support, and grass roots action is the need of the hour to make them effective and pervasive across the country.

ABOUT THE ORIENTATION PROGRAMME
The three day programme aims to deepen the understanding of existing policies, their potential and constraints in promoting efficient use of resources and minimizing waste in buildings. The programme explores the scope of harmonising the policy-driven and market-driven approaches to accelerate the adoption of resource-efficiency practices in the building industry.
COURSE OUTLINE

DAY 1
ENVIRONMENT CLEARANCE FOR BUILDINGS
- Framework for EIA for Building and Construction projects
- Challenges and Issues with implementation of EIA process for Building and Construction projects
- Making EIA work for Building and Construction projects
